INTRODUCTION TO **microspec** 

Microspec operates from a purpose built production facility in Bromborough in the UK and all of our manufacturing is performed here. We have state of the art equipment including injection moulding equipment, advanced robotics, extrusion blow moulding, bottling lines, clean rooms and laboratories. Our products are supplied worldwide and we are the trusted manufacturer for a huge variety of laboratories in many different fields including clinical, environmental, veterinary and pharmaceutical.

We manufacture under the Microspec brand as well as own label for many of our clients. We are always happy to talk to you about your requirements however large or small.

In keeping with our company ethos of sustainability we only use recyclable materials. If you need to discuss any aspect of recycling our products please get in touch we are always happy to help.

Loops and Spreaders

Our loops and spreaders are manufactured using 100 tonne injection moulding machines and advanced robots. Our mould tools are maintained in on site tool rooms to the highest standards to avoid sharp edges on the final product. We offer a range of different sized loops, needles, Wedge shaped® and L shaped spreaders. Each are available in different inner pack types and outer pack configurations. We can also offer bespoke packing configurations subject to a minimum order of 100 boxes.

Our Wedge Shaped Spreader (*design registered*) is unique to Microspec and offers the advantage of moving the pressure on the spreader to the centre of the head avoiding the tendency of the spreader to flip in use and giving a much more even inoculum.

Loops and spreaders are aseptically manufactured in cleanrooms giving a sterility assurance level of 10^{-3} . We also offer Ethylene Oxide terminally sterilised product giving a SAL of 10^{-6} .

Products are offered both in boxes of 500 or 1000 and also in Ecopacks for larger users to avoid wasting packaging.

We offer product in either grip seal bags or in Microseal Pouches.

Microspec Wildlife

Since the beginning of the company we have run our wildlife project as an integral part of our business. We feel it is important for companies to 'put something back'.

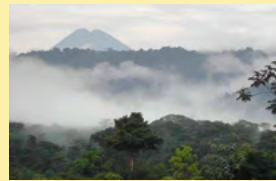

We try and keep the website up to date with the work that we do but some typical projects are listed below.

We have been working with the **World Land Trust** over several years to purchase and protect areas of rainforest in Ecuador. **The Ecuador Rainforest Project** helps safeguard diverse wildlife in an area where over 80% of the tropical rainforests have already been destroyed, leaving many species globally threatened. The project protects critically important habitats for many of Ecuador's rarest bird species, as well as a wide variety of other animals such as Jaguar and Howler Monkey. There are several rainforest habitats being protected in Ecuador.

We have helped **Born Free** with donations to their big cats project. **Born Free** rescues individual lions, tigers and leopards from tiny cages and gives them lifetime care at sanctuaries, funds major lion and tiger conservation projects and fights hunting big cats for 'sport'. The grace, strength and beauty of big cats holds a special fascination. Intelligent, powerful and agile, big cats are skilled hunters who rely on stealth, camouflage and lightning-speed reactions. But many big cats are endangered and sadly the main threat is human activity. Big cats are killed for their beautiful fur and body parts, their homes are destroyed, and captive animals are exploited in zoos and circuses.

We are currently supporting **The Seal Sanctuary** based in Cornwall. The charity's mission is:

- To rescue and provide expert care for sick, injured, or distressed seals and other marine animals in need of help who are found around our shores.
- To release them back into their natural environment once they are back to full health.
- To provide a permanent home and ongoing care for seals and other marine animals who cannot be released back to the wild.
- To educate and inspire generations to protect our seas and amazing marine life, now and for the future.
